

Experiment No. 1

Title:

Demonstrate inline, internal, and external JavaScript; use console methods; create a webpage showing user info and a welcome message.

Software / Tools Required:

1. Visual Studio Code (VS Code)
2. Google Chrome
3. HTML5
4. JavaScript (ES6)

Theory:

JavaScript is a client-side scripting language used to make web pages interactive. It can be included in an HTML document in three different ways:

(a) Inline JavaScript

JavaScript code is written directly inside an HTML element using event attributes like **onclick**.

(b) Internal JavaScript

JavaScript code is written inside the `<script>` tag within the HTML file.

(c) External JavaScript

JavaScript code is written in a separate **.js** file and linked using the `<script src=""></script>` tag.

Console Methods

JavaScript provides several console methods for debugging.

1. `console.log()`
2. `console.error()`
3. `console.warn()`
4. `console.info()`
5. `console.table()`
6. `console.time()`

Result / Conclusion

The practical was performed successfully. Different methods of JavaScript including **inline**, **internal**, and **external** were demonstrated. Various console methods were used for debugging, and a webpage displaying student/user information and a welcome message was created successfully.
